

# Every screen, its empty state, and the appendix

All seventeen screens from §9, the empty states, the five states that are not screens, the §10 drawing options, and the §11.6 appendix. Ink only, no accent colour. One text face, one mono face for figures. Light and dark are the same design at two levels of ground — nothing moves, nothing is recoloured.

APPENDIX

COLOUR · LIGHT

|                                                                                     |         |                                                               |
|-------------------------------------------------------------------------------------|---------|---------------------------------------------------------------|
|    | #f4f2ee | Ground. Every screen.                                         |
|    | #ffffff | The one live row, the focused field. Never twice on a screen. |
|    | #efece7 | Fixed bottom bars, callouts.                                  |
|    | #1a1917 | Text, filled set marks, and the single primary button.        |
|   | #4a4843 | Notes and secondary prose.                                    |
|  | #6b6862 | Metadata, targets, inactive tabs.                             |
|  | #8a877f | Section labels, completed exercises.                          |
|  | #a9a49a | Set indices, axis labels, the em dash for unrecorded.         |
|  | #c9c4b9 | Control borders.                                              |
|  | #dcd8d0 | Structural rules — header, footer.                            |
|  | #e6e2da | List rules. Empty set marks use #ddd9d1.                      |

COLOUR · DARK

|                                                                                     |          |                                                                                |
|-------------------------------------------------------------------------------------|----------|--------------------------------------------------------------------------------|
|    | #131312  | Ground. Warm, never pure black.                                                |
|    | #1e1e1b  | The one live row. #1a1a18 for fixed bottom bars.                               |
|    | #eceaee5 | Text, filled marks, and the primary button's fill — inverted, and left bright. |
|    | #b4b1aa  | Notes.                                                                         |
|   | #918e86  | Metadata, targets.                                                             |
|  | #79766f  | Section labels.                                                                |
|  | #63615b  | Set indices, separators inside a value, unrecorded.                            |
|  | #3b3a36  | Control borders. #56544e for empty set marks.                                  |
|  | #2b2a27  | Structural rules.                                                              |
|  | #232220  | List rules.                                                                    |

There is no accent colour in either theme, and adding one is the change most likely to break the design. Emphasis is weight, rule, and solid ink.

Libre Franklin for words. IBM Plex Mono, tabular figures, for every number, date and duration — so a changing value never shifts the layout.

**27/600** Screen title. One per screen.

**26/500** Elapsed clock. 92/500 for a running hold.

**19/600** Exercise name in a list. 23/600 when it is the live one.

**17/400** Recorded sets. 36/600 in the counter.

**16/400** Body, notes, button labels (600).

**14/400** Targets, dates, explanatory sublines.

**11/500** Section labels and tags, uppercase, .14em tracked.

## COMPONENTS

**Set mark.** 26×12 filled #1a1917 when done, 1px #b4afa4 outline when not; 22×9 and #a9a49a on a completed exercise. Absent entirely when the entry has no target sets.

**Counter.** 74px – pad, flexible value (36/600 mono, unit beneath), 74px + pad. Value pre-filled from today's target, or the last set when there is none.

**Hold clock.** 92/500 mono, centred, wall time; one 88px button that stops and records together.

**Picker sheet.** Search, count of matches, rows with what they measure and when last trained, match underlined, create-new at the foot. One component for plans and mid-session.

**Day grid.** 22px cells, 7px gaps, one column per week from the first session. Filled = trained, outline = not, dashed = not yet happened.

4 · 6 · 10 · 14 · 18 · 24 · 34

24 is the screen gutter and is never broken. 18 separates sections, 14 separates rows, 10 and below sit inside a row. 34 only above a new block on a sparse screen.

Radii: 10 controls, 12 primary and panels, 22 sheets, 46 the device.

Touch minimums, hard: 68 the record bar, 74 the ± pads, 62 primary buttons, 56 secondary, 44 chips and rows. Nothing tappable under 44.

**Exercise row.** Name left, n/N mono right, marks and target beneath. The live one gets #ffffff and 1px #1a1917 top and bottom — one per screen.

**Record bar.** 68px, full width, solid ink, labelled with the set number. The only solid block on a training screen.

**Tag.** 11px uppercase mono in a 1px box — `to failure` in ink, `one-off` in grey. Qualifiers, never headlines.

**Decision sheet.** Question, the actual content at stake, consequence, then buttons stacked with the safe one first. No red, no icons.

**Dot chart.** Best set per session, 9px dots, never joined by a line. One measurement at a time, named above it.

- 1 On the live session, tap the exercise. It opens with the counter pre-filled at today's target.
- 2 Tap **Record set 4**. Written immediately, no confirm, no save.

**Two taps at target. Three if the number differs by one.**

Already on the exercise: **one tap**. A held set: one tap to start, one to stop-and-record — the clock is wall time and survives a locked phone.

Outside a session, Quick log: pick from the three recent chips, adjust, **Log it**. Two taps, and no session starts.

Recording a set is never more than two taps and never asks for confirmation.

Unrecorded is not zero. It is an em dash with the reason beside it, everywhere a value appears.

A set may carry seconds, reps and a note at once, or any one of them. Every surface renders the subset it is given without inventing the rest.

No streak, no score, no combined total, no congratulation. A record is stated like any other fact.

No accent colour. No animation during training. Nothing decorative near the record bar or a running clock.

Editing a plan or an exercise never rewrites history. Past sessions keep the targets they had.

Archive, not delete. Only something with no history at all can be removed.

An empty screen names what will be there. It never says nothing is here yet, and never shows a figure it does not have.

## STAGE FIVE · §10, THE DRAWINGS

Three options, drawn at the size they would actually appear. I revise the stage-four refusal: not to illustration, but to the third option, which is the only one that cannot read as a mascot because it is not a picture of anything — it is the notation the screen will fill with, drawn empty.

## A · NONE

Plans go here. A plan is a list of exercises with the sets you intend to do.

You can also start a session without one and add exercises as you go.

**Make your first plan**

## B · THE APPARATUS

Plans go here. A plan is a list of exercises with the sets you intend to do.

**Make your first plan**

Words only. Nothing can go wrong, and nothing distinguishes an empty screen from an unfinished one.

Equipment, never a body — closest to furniture, but it is still a picture, and one object has to stand for every kind of training the person does.

The application's own set marks, unfilled — the same rectangles that fill in during a session, at the same size, in the same greys.

I would pick C. It is drawn from material the interface already has, so it adds no new visual vocabulary and cannot be mistaken for a mascot; it says what the screen is waiting for rather than decorating the wait; and it degrades correctly — the moment one real set exists, the marks are no longer a drawing, they are data, and the drawing simply stops. B is defensible and I would accept it, but rings cannot stand in for L-Sits and Nordic Curls, and a picture of equipment on the first-launch screen is the frame in which a doodle later looks reasonable. A stays right for any surface showing a real figure. C is placed below in first launch, an exercise never trained, an empty archive and an empty plan — nowhere else, and never during training.

#### STAGE FOUR · EMPTY STATES, AND THE STATES THAT ARE NOT SCREENS

Four of these now carry the stage-five mark: first launch, an exercise never trained, an empty plan and the empty archive. History-empty does not — it is already showing the shape of an entry, which is something being read.

Names what plans are and what will fill this space, and offers training without one — no tour, no sign-up, no apology. Close call: shipping starter plans; only the 21 exercises are pre-seeded, because a plan is the one thing that has to be yours.

Says what survived and what the clock did, then offers the two honest options — no modal, no data loss, no guessing when you stopped. Close call: auto-closing sessions after 24 hours; it waits instead, because closing a session is a claim about a day only the person can make.

Caught by the back gesture as well as Cancel, naming exactly what is at stake and stating where drafts do and do not exist. Close call: making Discard the visually loudest option; Save it takes the ink, and discard is a full-width row rather than a red word.

Two typed letters cut 118 to 9, matches underlined where they hit, ordered by what you have trained recently rather than alphabetically. Close call: an A–Z index rail down the side; search plus recency won, since at a hundred-plus exercises you know the name and the rail is another small target.

Shows the exact sets about to disappear and what does not change, so the decision is made against the record rather than a warning.

Close call: hold-to-delete; a plain two-button choice with the contents in front of you is harder to do by accident than a gesture you can lean on.

The same dashboard with four days of data — the grid runs from your first session, not from a fixed twelve weeks of blank past. Close call: hiding the grid until a month exists; drawing it with future days dotted teaches what it is while it is still honest.

Names what will be here and shows the shape of one entry in grey, so the format is learned before there is anything in it. Close call: a live-looking fake first row; it is set inside a labelled box at reduced weight, because a sample that reads as real data is a lie about your training.

Best and last trained are em dashes with the reason spelled out beneath — never recorded is not zero, and never reads as zero here. Close call: hiding the two figures entirely until data exists; keeping them as dashes shows what this screen measures before it can measure it.

Two empties on one frame: a plan that can still be started with nothing in it, and the archive stating what it is for rather than that it is empty. Close call: disabling Start on an empty plan; it stays live in outline weight, since a plan built during the session is a real way to train.

## Exercises

Every movement grouped, each carrying what it measures and when it was last trained — the two facts you need to pick one. Close call: sorting alphabetically in one flat list; grouping won, and the last-trained date stays on the row so neglect is visible here too.

**Turning off Seconds**

24 sets already recorded in seconds keep their values and stay readable. New sets stop asking for it. Nothing is deleted.

Archive this exercise

Used in 2 plans · Rings A, Legs & Core. Renaming updates both.

Changing what an exercise measures says plainly what happens to the 24 sets already recorded, before it is saved. Close call: blocking the change while history exists; allowed instead, because the consequence is stated and old sets are never rewritten.

At least one. Reps is on by default and can be changed later.

SIMILAR NAME

Pull-Up

Use that instead

Three fields, sensible defaults, and a quiet near-duplicate check so “Archer Pull-Up” doesn’t silently split a movement’s history in two. Close call: blocking creation on a similar name; it only offers the existing one, since near-duplicates are often genuinely different movements.

Archive is the exit, not deletion — everything keeps its sets, and only the one item with no history at all can actually be removed. Close call: separate archives for exercises and plans; one screen

with two sections, because “where did that go” is a single question.

14 · ONE PLAN

The plan as written, each line carrying what was actually done last time so you can judge it before starting. Close call: separate view

and edit screens; the plan reads and edits in place, with one Start button that always sits at the bottom.

One picker, used to add to a plan and to add mid-session —

matches show what they measure, what is already in the plan, and an escape into creating a new one. Close call: hiding exercises already in the plan; shown greyed instead, so searching “ring” never makes you wonder whether it exists.

Sets

−

3

+

Empty means as many as you do. The session shows no set marks and never says you are short.

Target reps

Not set

Empty means no number to hit. The counter opens at your last set instead of a target.

Rest

Not set

Empty means no rest timer starts. Nothing counts down and nothing sounds.

Note

Empty

Empty means nothing appears on the exercise mid-session. Set it for a cue like “tuck hard, no swing”.

Remove from this plan

History kept

READS IN THE SESSION AS

Ring Pull-Up (L-Sit) · 3 sets

No target, no rest timer, no cue.

Four fields that can each be empty, each stating in one line what its emptiness does mid-session, with the resulting session line shown at the bottom. Close call: a single “optional” label across all four; written out separately, because empty sets, empty target, empty rest and empty note do four different things.

Name, then exercises, with copying an existing plan offered as the shortcut it usually is — and no requirement to finish before saving. Close call: a step-by-step create flow; one editable page instead, identical to the plan screen, so making and changing a plan are the same act.

Opens where training starts: three plans, each one tap from running, with quick log at the same level. Close call: putting the dashboard on Home — separated, because the thing you need at 18:39 in a

6 • DASHBOARD — NEW

movement was last done — no streak, no score, no total. Close call: sorting the neglected list by days since; it sorts by longest gap and states the date beside it, so a movement you deliberately stopped reads as a fact rather than a debt.

### Legs & Core

5 Aug • 37 min

Nordic Curl • L-Sit • Hollow Body Hold • 9 sets

Newest first, with clusters and gaps left visible — a one-off carries a tag and no duration, so it can never be read as a session. Close call: hiding the gap rules; they stay, because a four-day break is part of the record and drawing it costs one hairline.

Read on the sofa at 23:04 — the hairlines drop to #232220 so the list stays a list without glowing. Close call: brightening the one-off tag to match its light-mode weight; it stays at secondary, because the tag is a qualifier, not a headline.

Every set of the day at once, against the targets that were actually in force then, with a set that carries two values and one that is missing a value shown differently from zero. Close call: an edit mode with a pencil; instead any set is tappable and the line at the bottom says so once.

The only chart in the application: best set per session, plotted as dots so gaps read as gaps rather than a line pretending training happened in between. Close call: plotting every set instead of the

best; best-per-session won because it is the question actually being asked, and the raw sets sit directly underneath.

9 · ONE EXERCISE, ALL TIME — DARK

The two-measurement case: two bests side by side, a switch above

the chart naming which one is plotted, and sets that carry both values or only one. Close call: plotting both measurements on one pair of axes — refused, seconds and reps do not share a scale, so only one is drawn at a time.

STAGE ONE • WHILE TRAINING

1 • LIVE SESSION — LIGHT

Answers “what’s left” from the floor — filled marks per set, one exercise on white as the live one. Close call: the current exercise was nearly pinned to the top instead of held in plan order; order won, because you look for the movement you’re doing, not the top of a list.

Same design at a lower ground — the live row inverts to a lifted panel rather than changing hue. Close call: dark could have dropped to pure black for OLED; #131312 won so the paper stays warm and the rules stay visible in a lit room.

Records a set in one tap — the value arrives pre-filled from today's target and is written the instant the bar is pressed. Close call: a keypad for the number was nearly the primary control;  $\pm 74$ px pads won because chalky thumbs miss small keys and the value is almost

always within one of the target.

2 · ONE EXERCISE, LIVE — DARK · COUNTED

The record bar is the one solid ink block on the screen, so it inverts to paper-on-black at night and stays the brightest thing in a dark

garage. Close call: dimming that bar in dark mode to avoid glare;  
findability beat comfort.

2B · ONE EXERCISE, LIVE — HELD · CLOCK RUNNING

Same screen, held measurement: the clock replaces the counter

and one button both stops and writes. Close call: showing the 30s target as a bar filling up — cut, because a target that visibly runs out starts nagging, and set 1 at 31s carries a second value (12 reps) that a progress bar cannot hold.

Five pull-ups on a doorway bar, recorded in two taps and no session — the last three exercises used sit under the picker so the common case never opens a list. Close call: defaulting the value to the last quick log of that exercise; it starts at the last value logged anywhere, because the doorway bar and the rig are the same movement.

The whole session in one look, including what was planned and never trained, with the note written while it is still true. Close call: leading with duration and set count as a stat strip — cut, because a session is what you did, and the numbers are already in the rows.
